

To find out how many drops are in a milliliter, we need to establish how many times we have to multiply the number of milliliters in a drop (0. 05ml) until we reach 1 ml. $X \text{ drops} \times 0. 05 \text{ gtt} = 1 \text{ ml}$. $20 \text{ drops} \times 0. 05 \text{ gtt} = 1 \text{ ml}$. Alternatively, we may divide 1 ml by 0. 05 to get the number of drops in 1 ml. $(1/0. 05) \text{ ml} = 20 \text{ gtt}$.
