### How to Reconstitute BPC 157 on Vimeo

When reconstituting your BPC-157 powder, follow the hygiene protocols using the alcohol swabs. Draw the BAC water out of the vial, and push it into the BPC-157 vial, leaking the water down the sides of the

interior. If you have a 5mg vial of BPC-157, you'll need to reconstitute the powder using three insulin syringes filled with BAC water.

## How to Properly Mix, Measure, and Store Peptides - Paradigm Peptides

Bacteriostatic Water or Sterile Water To begin the peptide reconstitution process, you'll want to wipe down the top of your vials as a safety precaution with the alcohol wipe. Then you'll want to use your syringe and pull either your bacteriostatic or sterile water from that vial.

May 3, 2016 #2 As far as reconstituting goes, yeah just draw 1mL of the BA water and inject it through the rubber stopper of the BPC vial. I usually pull 1mL of air out of the vial after I push the water in, in order to reduce pressure inside the vial. Since you're putting 1mL into 5mg, yes every 0. 1mL would be 500mcg of BPC-157.
