When your cycle comes to an end and you're ready to promote recovery, the first thing you need on hand is a Selective Estrogen Receptor Modulator (SERM) and your top choices will always be Tamoxifen Citrate (Nolvadex) and Clomiphene Citrate (Clomid). You will not need both, and each one can get the job done; simply choose one.

## **What Is Steroid Tapering, and Why Is It Important? - GoodRx**

Tapering must be done carefully to avoid both recurrent activity of the underlying disease and possible cortisol deficiency resulting from hypothalamic-pituitary-adrenal axis (HPA) suppression during the period of steroid therapy. (See "Pharmacologic use of glucocorticoids", section on 'HPA axis suppression' . )
