# THE DANGERS OF LOW T3 SYNDROME

IN CRITICAL AND CHRONIC ILLNESS

THYROIDPATIENTS.CA

## ILLNESS DEPLETES T3

Various illnesses increase the rate of thyroid hormone inactivation to temporarily lower the metabolic rate. Deiodinase Type 3 converts T4 into "Reverse T3" and converts T3 into T2. The net result is T3 deficiency.

## TSH NOT INDICATIVE

The pituitary TSH cooperates with Deiodinase Type 3 in depleting thyroid hormone supply. TSH does not rise despite lower levels of T4 and T3.

## RISK OF DEATH

Death rates increase the lower the T3 level falls, and the longer the T3 depletion is maintained during illness

## RECOVERY

TSH triggers increased thyroidal secretion of T3 hormone before Deiodinase Type 3 returns to normal. T3 supply overcomes the rate of T3 depletion, and T3 rises to aid recovery
