Taking pills The direction are easy take two pills a day spit dosages for 4 week so the math is fairly simple as to figure out how many bottles to purchase to run a cycle. I'm looking at purchasing cut mix 150 it's a tri blend of test prop, tren prop, and drostanolone prop. Each dosed at 50mg -1 vial is 10ml/vial 150mg/ml.

CUT MIX 500 MG Per ml - Volt Pharma

Features Designed to meet a wide range of applications SEMS screws for easy wiring Panel controlled status LED (except MIX-M501M) Analog communications Rotary address switches (except MIX-M500X) Low standby current Mounts in 4" square junction box MIX-M502M Zone Interface Module

PDF CAT-5903 MIX-500 Series Intelligent Addressable Modules Rev6 - Mircom

Features

- Designed to meet a wide range of applications
- SEMS screws for easy wiring
- Panel controlled status LED (except MIX-M501M)
- Analog communications
- Rotary address switches (except MIX-M500X)
- Low standby current
- Mounts in 4" square junction box

Description

Mircom's intelligent module products are designed to meet a wide range of applications. Monitor and control modules can be used to supervise and activate sounders, strobes, door closers, pull stations, waterflow switches, conventional smoke detectors, and more. Each module is rigorously designed and tested for electromagnetic compatibility and environmental reliability, in many cases exceeding industry standards. Modules are addressed with easy-to-use rotary code switches. Full size modules mount in standard 4" x 4" x 2 1/2" junction box. Wiring terminals are easily accessible for troubleshooting purposes.

MIX-M500M Monitor Module, MIX-M501M Mini Monitor Module and MIX-M500DM Dual Input Monitor Module

Mircom's monitor modules provide an interface to contact devices, such as security contacts, waterflow switches, or manual stations. They are capable of Styles A and B supervised wiring to the load device (MIX-M500M is capable of Style D). Conventional 4-wire smoke detectors can be monitored through their alarm and trouble contacts, wired as an initiating loop to the module. In addition to transmitting the supervised state of the monitored device (normal, open, or short), the full analog supervision measurement is sent back to the panel. This allows impedance changes in the supervised loop to the monitored device to be detected.

The MIX-M500DM is capable of monitoring two separate Class B circuits simultaneously, making it ideal for waterflow tamper switch and flow switch monitoring. The small size of the MIX-M501M allows it to fit inside devices or junction boxes behind devices.

MIX-M500R Relay Module

The MIX-M500R Relay Module contains two isolated sets of Form-C contacts, which operate as a DPDT switch. The module allows the control panel to switch these contacts on command. No supervision is provided for the relay contacts.

MIX-M502M Zone Interface Module

The MIX-M502M Zone Interface Module allows Mircom's intelligent panels to interface and monitor two-wire conventional smoke detectors. All two-wire detectors being monitored must be UL or ULC compatible with the module. The MIX-M502M is addressed through the communication line of an intelligent Mircom system. It transmits the status of one zone of two-wire detectors to the fire alarm control panel. Status conditions are reported as normal, open, or alarm. The interface module supervises the zone of detectors and the connection of the external power supply.

MIX-M500S Supervised Control Module

The MIX-M500S Supervised Control Module provides supervised monitoring of wiring to load devices that require an external power supply to operate, such as horns, strobes, or bells. It is capable of Styles Y and Z supervision. Upon command from the control panel, the MIX-M500S will disconnect the supervision and connect the external power supply across the load device. The disconnection of the supervision provides a positive indication to the panel that the control relay actually turned on. The external power supply is always relay isolated from the communication loop, so that a trouble condition on the power supply will never interfere with the rest of the system. Full analog measurement of the supervised wiring is transmitted back to the panel and can be used to detect impedance changes or other special test functions.
