8 - excuses: all you say for not following your diet or skipping trainings, is an excuse (except in extreme situations). "Oh, I ate this huge cake because I went to a party last weekend and couldn't be antisocial". Learn how to say no, or don't go to the party. Or, in last case, be honest with yourself and know that this slip away will cost you time for your progress. Don't expect to be shredded in 2 months time.

A lack of protein in the diet may increase appetite, ensuring we obtain the proper nutrition, but it could also result in an imbalance of calories, carbs, and fat and make it easier to put on weight, particularly in a low metabolic state. It may also be more difficult to stabilize blood sugar, which influences our energy and how we feel after meals.

□□□Il legame positivo tra leptina, insulina e BMI (indice di massa corporea) è molto forte. La leptina è prodotta principalmente dalle cellule adipose del sottocutaneo, alti livelli di □□□testosterone portano ad un accumulo di grasso viscerale e riduzione dell'adipe sottocutaneo con conseguente minore BMI e diminuzione della leptina. □□□Questo non deve far allarmare; livelli bassi di leptina aumentano la sensibilità dei suoi recettori. Il testosterone fa lo stesso: un elevato livello porta ad una ipersensibilizzazione degli Ob-Rb con conseguente miglior "comunicazione".
