The highly androgenic effect of Hexabol (Trenbolone Hexahydrobenzylcarbonate) prevents a possible overtraining syndrome, accelerates regeneration, and the muscles look full, masculine and at the same time with sharp outlines. Hexabol - 10 amps. x 76 mg. is a slow-acting version of the strongest anabolic steroid. Hexabol contains Trenbolone Hexahydrobenzylcarbonate and is an extremely powerful anabolic and androgenic steroid - 5 times stronger than Testosterone. Hexabol combinations Hexabol combines well with any form of Testosterone, as well as with any other steroid. [their explanation](#)

Overview Parabolan is an Hexahydrobenzylcarbonate ester of Trenbolone. It is known as the longest running ester of trenbolone surpassing testosterone with three times higher androgenic activity and five times higher anabolic activity. That is why it is considered as the most potent ester of trenbolone in the market. Hexabol-76.5 mg Description: Trenbolone hexahydrobenzylcarbonate is a synthetic, injected anabolic-androgenic steroid (AAS) of the nandrolone group and an androgen ester - specifically, the C17 β hexahydrobenzylcarbonate (cyclohexylmethylcarbonate) ester of trenbolone - which was marketed in France for medical use in humans but has since been discontinued. Hexabol 10 ampoules/1 ml (76 mg/1 ml) \$ 937.00. Hexabol from Omega Meds is a strong, androgenic steroid, also known as Parabolan, with high anabolic properties. Its peculiarity is that, unlike other strongly androgenic steroids, it is not aromatized. The active chemical substance of the drug does not turn into estrogens, so that the athlete ...
