Metenolone enanthate, or methenolone enanthate, sold under the brand names Primobolan Depot and Nibal Injection, is an androgen and anabolic steroid (AAS) medication which is used mainly in the treatment of anemia due to bone marrow failure. It is given by injection into muscle. Esterified steroids are produced to prolong the window of therapeutic effect following administration, providing a less often injection schedule beside to injections of free (unesterified) steroid. Methenolone Enanthate injection is available in 100mg/ml ampoule and has a duration of action (due to the gradual transition of the drug from the muscles in the blood), at approximately 2 weeks. Methenolone has no estrogenic side effects, and its effects on cholesterol levels are minimal. In doses of 200 mg per week or less (intramuscular) blood ... However, because the oil solubility of methenolone enanthate is only moderate, preparations are typically of only 100 mg/mL. This can give a psychological impression of not being as strong a compound as more concentrated products. In addition, it is most popular for male bodybuilders to stack Primobolan® with other (generally stronger) steroids in order to obtain a faster and more enhanced effect.

Primobolan (methenolone enanthate) it produces a weaker effect than Deca-Durabolin it is a very good basic steroid whose effects are predominantly anabolic. The fact that an enanthate ester is added to this steroid enables a slow and gradual release from the injection site. #medschoolproblems #medschoolmemes #medschoollife #medstudentlife #medstudent #student #med #medicine #doc #doctor #nurse #memes #memesdaily #funnymemes (Methenolone Enanthate) Methenolone is an anabolic androgenic steroid that was first released in 1962 by Squibb under the trade name Nibal (oral)

and Nibal Depot (injectable). This was a very short-lived product on the U.S. market and by the mid-1960's the German pharmaceutical powerhouse Schering would own all rights to the Methenolone hormone.

Inj dbol has a 36-39hr half-life so daily pinning is necessary coupling it with a slower ester test allows you to pin m-f without having to inject on Saturday and Sunday. This is a money saver as it makes 1 vial of dbol last 2 weeks instead of 1.5 weeks? It is a fast acting steroid that has very short half-life. You are required to inject it every day in the body to keep the steroid's level steady in the blood. Because of the shorter ester attached to the compound, it leaves the body rather quickly. #dmamultimarks #dma #menstyle #oxandrolonepuro #winstrol #anabolics #muscle #musculomagro #eliminaciondegrasa #powder #fitnessmode #menspower #training #gymmen #powerlifting #crossfitter #running #run #gymaholic #gymlife #runners [great post to read](#)
