PT-141 is a research peptide also referred to as bremelanotide and sometimes known as the 'libido drug'. PT-141 is a derivative of M2 (Melanotan 2). However, unlike M2, it lacks the c-terminal amide molecules. Bremelanotide is being studied and promises to control blood flow restriction, inflammation and more importantly help treat sexual ...

PT-141, a synthetic peptide analogue of alpha-MSH, is an agonist at melanocortin receptors including the MC3R and MC4R, which are expressed primarily in the central nervous system. Administration of PT-141 to rats and nonhuman primates results in penile erections. Systemic administration of PT-141 t
