Deca Durabolin (Nandrolone Decanoate) by Bill Roberts - Deca, also known as Deca Durabolin or nandrolone decanoate, is perhaps the second-best known injectable anabolic steroid after testosterone. Deca Durabolin is officially classified as a 19-nortestosterone (19-nor) anabolic androgenic steroid. The 19-nor classification refers to its direct structural nature, which is the testosterone hormone lacking a carbon atom at the 19th position. Since the mid 1960's, Deca Durabolin has become a staple in most testosterone and/or dianabol cycles, the main reason is that Deca adds a lot of strength to a cycle without increasing side effects. When used in a testosterone and/or dianabol cycle, deca really adds weight to the cycle without much more stress on the system. Deca Durabolin is a nandrolone based steroid (nandrolone decanoate) that has been widely used since the 60's because of its mild side effects and a much lower rate of aromatization when compared to testosterone.

Initiate a discussion about Deca Durabolin with any experienced bodybuilder and the first thing you will be told is that Deca is the number one steroid to mix with testosterone supplements. This is because Deca Durabolin suppresses the body's testosterone natural production. Hence is necessary to replace it to reach the wanted results.

Deca Durabolin is an anabolic steroid quite useful for athletes and all those involved in bodybuilding. Nandrolone, the essential substance contained, characterizes Deca Durabolin. This substance causes a disintegration of the muscles, increasing at the same time the amount of testosterone hormone.
