1-testosterone (dihydroboldenone), or DHB for short, is an anabolic steroid that has some unique properties of interest to bodybuilders. Interestingly, in spite of the fact that the name can be confusing, in no way is DHB testosterone. In fact, it is simply the 5alpha reduced form of Equipoise (boldenone).

Not everyone...

...is a runner

...can do hours of yoga

...wants to lift weights

...wants to be vegan

...likes the gym

...wants abs

...aspires to be shredded

...wants to count calories

We're all different.
So stop worrying about what others will think and just
find what works for you.
Not anyone else.
You.

Just like how Testosterone interacts with 5-alpha reductase to produce dihydrotestosterone (DHT), Boldenone 5-alpha reduces into DHB (Dihydroboldenone). Among many using this hormone in a performance enhancing context, it is reported to be formidable to Trenbolone in regards to muscle building potential, but with a more favorable side-effect
