In this particular cycle (test/deca/dbol), it is most logical to use a long esterated testosterone such as cypionate, enanthate, or the sustanon 250 blend (which is mostly made up of long esters). Preheat the oven to 350 degrees. Mix all ingredients together in a bowl except for the sprinkles. Form into 12-15 balls and roll them into the sprinkles. Place on a greased baking tray or with parchment paper. Refrigerate for 15 min (I've omitted this step and didn't notice a difference so feel free to skip). Deca is way stronger than most people think and at a certain point it's water that goes away. Also deca can have nasty sides so I would try it lower and see how it goes. You have plenty of time later. Dec 3, 2020
