I know bathroom selfies are not so...nice, but I just felt like giving a little Anatomy lesson. I think its important for people to understand the importance of including unilateral exercises in their strength training routines. There is a lot of hype around doing "just the compound barbell lifts bro". Doing only compound barbell lifts WILL make you bigger and stronger, without a doubt... The problem is, if a person does only compound lifts, they are likely to develop muscular imbalances. Unilateral training is important to help heal and prevent muscular imbalances. Unilateral AND bilateral exercises are both essential to making yourself as amazing as possible as safely as possible. So if you like doing the bench, squat, deadlifts, Military presses and rows with a barbell, do those same movements with dumbbells too. I like to do a 6 week block of training with mostly barbells, followed by another 6 week block of mostly dumbbells. #usedumbell #anatomy #physiology #bodybuilding #shreddedcheese #cutting #testosterone #testosteroneration #menshealth #mensfitness # 937
