Sustanon: Introduction. Susta 300 (technical name sustanon) is a combination of four different testosterone varieties blended together to deliver both rapid acting and long lasting "digestion" rates, thus offering a highly accessible means of increasing strength and improving anabolism for seasoned users. If there's nothing wrong with steroids, then why are they illegal in professional sport, now I'm not saying that it doesn't go on, that's a different conversation, and I'm not talking about whether they're right or wrong because that's a different conversation too, I'm talking about me and you, now going

down the steroid route isn't for me, if it is for you then I hope you'll have the courage to be honest with your client's or else your just adding to the pack of lies that is the fitness industry, now if you're not willing to be honest then maybe there's something deep down in your moral compass telling you it's not right, in which case why would you go down that road because that's a decision you're going to have to live with.???

300-900mg per week. Goes well with: All androgenic/anabolic steroids especially Dianabol, Deca, Tren and Anadrol. Expected weight / muscle gain: Depending on diet and body composition, increase in body weight by up to 10kg is possible on a 12-16 week cycle of Sustanon Only. Very good strength gains from week 2. How fast to notice changes: The numbers tell you how many milligrams of Sustanon are in

1 milliliter of the substance. I recommend using Sustanon 250 or Sustanon 300, because if the concentration of Sustanon is more than 300 mg per milliliter the injections can be painful and usually, most labs put less than 500 milligrams in Sustanon 500.
